[The Effects and Consequences of Migration and Immigration on the Lebanese Economy and Tourism Sector](#) Aug 18 2021 This book tackles several important and timely topics with regards to Lebanon, especially after the Syrian conflict. The contributions here analyse the situation of the internal and external Lebanese economy and tourism, and shed light on the causes and effects of migration and immigration. The articles provide detailed insight into private and public policies, and offer a holistic analysis that enables the reader to benefit from their suggested recommendations. The book can be used as a reference book for scholars and practitioners in the public and private sectors interested in Middle Eastern politics, economics forecasting, marketing and tourism studies. The articles were originally presented and discussed at the Second Local

Economics and Tourism Conference held in May 2017 at the Lebanese International University.

**A Framework for Assessing Effects of the Food System** May 03 2020 How we produce and consume food has a bigger impact on Americans' well-being than any other human activity. The food industry is the largest sector of our economy; food touches everything from our health to the environment, climate change, economic inequality, and the federal budget. From the earliest developments of agriculture, a major goal has been to attain sufficient foods that provide the energy and the nutrients needed for a healthy, active life. Over time, food production, processing, marketing, and consumption have evolved and become highly complex. The challenges of improving the food system in the 21st century will require systemic approaches that take full account of social, economic, ecological, and evolutionary factors. Policy or business interventions involving a segment of the food system often have consequences beyond the original issue the intervention was meant to address. "A Framework for Assessing Effects of the Food System" develops an analytical framework for assessing effects associated with the ways in which food is grown, processed, distributed, marketed, retailed, and consumed in the United States. The framework will allow users to recognize effects across the full food system, consider all domains and dimensions of effects, account for systems dynamics and complexities, and choose appropriate methods for analysis. This report provides example applications of the framework based on complex questions that are currently under debate: consumption of a healthy and safe diet, food security, animal welfare, and preserving the environment and its resources. "A Framework for Assessing Effects of the Food System" describes the U.S. food system and provides a brief history of its evolution into the current system. This report identifies some of the real and potential implications of the current system in terms of its health, environmental, and socioeconomic effects along with a sense for the complexities of the system, potential metrics, and some of the data needs that are required to assess the effects. The overview of the food system and the framework described in this report will be an essential resource for decision makers, researchers, and others to examine the possible impacts of alternative policies or agricultural or food processing practices.

**Fixed-base Simulator Investigation of the Effects of L [alpha] and True Speed on Pilot Opinion of Longitudinal Flying Qualities** Feb 09 2021 The study is directed toward investigating the effects on pilots rating of large variations (L alpha) in the relative amplitude and phase of the basic airplane responses to elevator control. The effects of L alpha and true speed on longitudinal flying qualities, optimum control gain, and normal acceleration response to turbulence were investigated in a ground simulator. The steady state ratio of normal acceleration to angle of attack was found to be of significance both to the flying qualities of an airplane and to the optimum longitudinal control gain. Normal acceleration response to rough air was demonstrated to be primarily a function of L alpha and the short period frequency and damping ratio.
