Death in the Modern World Aug 07 2020 Death comes to all humans, but how death is managed, symbolised and experienced varies widely, not only between individuals but also between groups. What then shapes how a society manages death, dying and bereavement today? Are all modern countries similar? How important are culture, the physical environment, national histories, national laws and institutions, and globalization? This is the first book to look at how all these different factors shape death and dying in the modern world. Written by an internationally renowned scholar in death studies, and drawing on examples from around the world, including the UK, USA, China and Japan, The Netherlands, Scandinavia and Eastern Europe. This book investigates how key factors such as money, communication technologies, economic in/security, risk, the family, religion, and war, interact in complex ways to shape people's experiences of dying and grief. Essential reading for students, researchers, and professionals across sociology, anthropology, nursing and social work, and for anyone who wants to understand how countries around the world manage death and dying.

Mortality amongst Illicit Drug Users Nov 29 2019 Over the past 40 years the rate of illicit drug use worldwide has risen dramatically, and with it the number of deaths reported among drug-using populations. What are the clinical, ethical and psychopathological implications of these deaths? In this book, Shane Darke and his team provide the first full, synthetic review of the epidemiology, causes, prevalence, demography, and associated risk factors of illicit-drug-related mortality. In addition, they examine and evaluate interventions to reduce these deaths. The major causes of death among illicit drug users are overdose, disease, suicide and trauma. Each is independently examined. This is an important book for all clinicians and policy makers involved in issues relating to illicit drug use.

Judge Dee and the Three Deaths of Count Werdenfels May 04 2020 Judge Dee is back to solve a brand-new case involving the mysterious death of the vampire Count Werdenfels. The mystery? Who killed him. The twist? Three different people have proudly proclaimed to have committed the murder. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Drowning and Other Undetermined Factors The Death of Natalie Wood Jul 30 2022 What happened to beautiful 43 year old Natalie Wood on the night of 29th November, 1981, when she drowned in the dark waters off Santa Catalina Island, California? Almost thirty-three years later, we are no nearer solving the mystery. Pamela Lillian Valemont, a crime research numeroologist of more than thirty-five years standing, decided to look into this mysterious case. Delving further, using a completely different set of diagnostic detective tools, she is able to furnish us with some astounding clues in answer to the question "Whatever happened to Natalie Wood?"

Hollywood Death and Scandal Sites May 28 2022 For more than a century, people have been drawn to sites of tragedy involving the rich, beautiful and notorious of Hollywood. Tourists at the center of the movie universe flock to Rudolph Valentino's grave, the house where Marilyn Monroe died, the "O.J. murders" condo, the hotel where John Belushi overdosed, a myriad of haunted mansions. In its extensively researched and enlarged second edition, this book tells the stories of these locations and makes finding them simple. Seventeen driving tours include more than 650 sites. Each tour covers a specific area, from Hollywood and the Sunset Strip to Brentwood and Malibu, covering the entire Los Angeles basin. Concise, easy-to-follow directions are given to each location with 145 photos and the fascinating story behind each stop.

Mortality and Its Risk Factors Among Professional Athletes Jun 16 2021 This eye-opening study adds to the scarce scholarly literature on professional athletes, bringing empirical rigor to issues often clouded by mystery and hearsay. It identifies socioeconomic, demographic, and career variables as risk factors for mortality among former NBA and NFL players, along with hypotheses to be tested relating to elite athletes and other U.S. populations. A detailed multivariate analysis compares mortality factors, rates, and outcomes within and between the two leagues, comparing them also with the general U.S. male population. The findings and conclusions gleaned from this research offer possibilities for future research to improve health and quality of life in this specific athlete cohort, among athletes in general, in other groups, and in the larger society. Potential risk factors analyzed in this groundbreaking study: · Race · Body Mass Index (BMI) · U.S. birthplace region (Northeast, West, Midwest, South) · Years of playing experience · Playing position Mortality and Its Risk Factors among Professional Athletes will spark interest among professionals and researchers in public health, sports medicine, and epidemiology; current and former NBA and NFL players, their families, coaches, trainers, and union representatives; non-professional basketball and football players, athletes from other sports, and their families, coaches, and trainers; social scientists; policymakers; obesity researchers; parents of children who play contact sports; students, teachers, and researchers in occupational health and racial disparities; and health care providers.

International Handbook of Adult Mortality Jan 24 2022 This handbook presents a comprehensive and up-to-date overview of unprecedented substantive, theoretical, methodological, and statistical developments and insights, and an in-depth examination of trends and patterns, in adult mortality around the world. With over two dozen chapters and more than 50 authors, this volume draws from top international mortality experts to provide one of the best overviews of life expectancy extant. The book documents remarkable gains in life expectancy, which stand out as one of the most important accomplishments of the twentieth century. Individuals in more developed countries can expect to live longer now than ever before, especially the Japanese who enjoy record-setting life expectancies. The book also explores unfortunate declines in life expectancy in selected countries brought on by such factors as infectious diseases; accidents, suicides, and homicides; and political and economic conflict and turmoil. This book synthesizes the wealth of mortality information available, clearly articulates the central findings to-date, identifies the most appropriate datasets and methods currently available, illuminates the central research questions, and develops an agenda to address these research questions. The authors carefully examine central factors related to mortality, including health behaviors, socioeconomic status, social relations, biomarkers, and genetic factors. The book will prove especially relevant to researchers, students, and policy makers within social and health sciences who want to better understand international trends and patterns in adult mortality.

Death and Dying in America Mar 14 2021 This engaging new book takes a fresh approach to the major topics surrounding the processes and rituals of death and dying in the United States. It emphasizes individual experiences and personal reactions to death as well as placing mortality within a wider social context, drawing on theoretical frameworks, empirical research and popular culture. Throughout the text the authors highlight the importance of two key factors in American society which determine who dies and under what circumstances: persistent social inequality and the American consumerist ethic. These features are explored through a discussion of topics ranging from debates about euthanasia to deaths resulting from war and terrorism; from the death of a child to children's experience of grieving and bereavement; and from beliefs about life after death to more practical issues such as the disposal of the dead body. Drawing on sociological, anthropological, philosophical, and historical research the authors present the salient features of death and dying for upper-level students across the social sciences. For anyone interested in learning more about the end of life, this book will provide a useful and accessible perspective on the uniquely American understanding of death and dying.

The Psychology of Death, Dying, and Bereavement Mar 02 2020

The Global Decline of the Mandatory Death Penalty Apr 02 2020 Historically, at English common law, the death penalty was mandatory for the crime of murder and other violent felonies. Over the last three decades, however, many former British colonies have reformed their capital punishment regimes to permit judicial sentencing discretion, including consideration of mitigating factors. Applying a comparative analysis to the law of capital punishment, Novak examines the constitutional jurisprudence and resulting legislative reform in the Caribbean, Sub-Saharan Africa, and South and Southeast Asia, focusing on the rapid retreat of the mandatory death penalty in the Commonwealth over the last thirty years. The coordinated mandatory death penalty challenges - which have had the consequence of greatly reducing the world's death row population - represent a case study of how a small group of lawyers can sponsor human rights litigation that incorporates international human rights law into domestic constitutional jurisprudence, ultimately harmonizing criminal justice regimes across borders. This book is essential reading for anyone interested in the study and development of human rights and capital punishment, as well as those exploring the contours of comparative criminal justice.

Death and Afterlife Pages Gregory Tourhb Nov 21 2021 Gregory of Tours was a bishop of late antiquity who was famously devoted to promoting the efficacy of saintly powers. In his writings, both historical and hagiographical, Gregory depicted the saints and reprobates of his age. This book analyses Gregory's writings about death and the afterlife, thereby illuminating the bishop's pastoral imperative to save souls and revealing his opinions about the fates of Merovingian royals, among many others he mentions in his voluminous text. The study provides insight into Gallic peoples living at the dawn of the Middle Ages and their hopes and fears about the otherworld. It offers an original, nuanced interpretation of Gregory's motives for penning his works, particularly the *Historiae*, which remained unfinished upon the author's death.

Sudden Death Aug 26 2019 This book provides up-to-date guidance on the diagnosis and treatment of sudden death, including sudden cardiac and non-cardiac death. Sudden death (SD) has become a major challenge confronting not only cardiologists, but also specialists in respiratory medicine, endocrine medicine, infectious diseases, etc. Chronic diseases are also among the causes of SD. This book summarizes the occurrence of SD, especially in specific groups (such as women, young and middle-aged groups), its causes, predisposing factors, lifestyle, morbidity, point of care testing, and advanced treatment methods including extra-corporeal membrane oxygenation, cardiopulmonary resuscitation and hypothermia treatment. In order to improve the early diagnosis, prevention and treatment of SD in clinical practice, the book also provides extensive data on its pathophysiological mechanism, epidemiology and etiology, together with detailed analyses.

A Mortality Study of 1.3 Million Persons by Demographic, Social and Economic Factors Oct 01 2022

Modern Death Sep 19 2021 There is no more universal truth in life than death. No matter who you are, it is certain that one day you will die, but the mechanics and understanding of that experience will differ greatly in today's modern age. Dr. Haider Warraich is a young and brilliant new voice in the conversation about death and dying started by Dr. Sherwin Nuland and Atul Gawande. Dr. Warraich takes a broader look at how we die today, from the cellular level up to the very definition of death itself. The most basic aspects of dying—the whys, wheres, whens, and hows—are almost nothing like what they were mere decades ago. Beyond its ecology, epidemiology, and economics, the very ethos of death has changed. Modern Death, Dr. Warraich's debut book, will explore the rituals and language of dying that have developed in the last century, and how modern technology has not only changed the whys, whens, and wheres of death, but the what of death. Delving into the vast body of research on the evolving nature of death, Modern Death will provide readers with an enriched understanding of how death differs from the past, what our ancestors got right, and how trends and events have transformed this most final of human experiences.

A Study on Psycho-social Factors Preventing Indian Women from Seeking Institutional and Assisted Birth May 16 2021 INTRODUCTION 'Five women in India die every hour during childbirth: World Health Organization (WHO). Nearly 45,000 mothers die due to causes related to childbirth every year in India, as per WHO. The number of deaths in India during childbirth accounts for 17 per cent of such deaths globally.' The Indian Express, New Delhi, 16th June 2016. Maternal Health is an important aspect for the development of any country in terms of increasing equity & reducing poverty. The survival and well-being of mothers is not only important in their own right but are also central to solving large broader, economic, social and developmental challenges. A woman's death is more than a personal tragedy, -countless, it represents an enormous cost to her nation, her community, and her family. Any social and economic investment that has been made in her life is lost.' (NRHM, Mother and Child Tracking System, 2016). Maternal death is defined by the World Health Organization (WHO) as "the death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management but not from accidental or incidental causes." The two measures of maternal death are the maternal mortality ratio (MMR), maternal mortality rate, lifetime risk of maternal death and proportion of maternal deaths among deaths of women of reproductive years (PM).

Sudden Death in the Young Apr 14 2021 Highly illustrated complete overview of pathological aspects of sudden death in the young, from before birth to middle adult life.

Forensic Pathology of Infancy and Childhood Jul 06 2020 The investigation of sudden or unexplained death of children represents a unique medical and forensic area of study. Children have unique anatomic and functional characteristics that must be recognized and understood by the medical investigator. Further complicating this process is the fact that the anatomic structure, composition and function of various organs and organ systems in the pediatric population change throughout the developmental stages of childhood. The disease processes, reactions to trauma and risk factors for accidental death and homicide change from infancy through adolescence. Forensic Pathology of Infancy and Childhood provides an authoritative, comprehensive reference text devoted to the medicolegal investigation of sudden unexpected death in children. With contributions from internationally renowned experts, individual chapters focus on specific unique causes and organ systems with detailed accounts of the changes in fatal diseases, risk factors of causes of sudden death, and responses to fatal trauma that occur as a child grows from neonatal stage through infancy, toddlerhood, childhood and adolescence. This text is an essential reference resource for forensic pathologists, medical examiner offices, pediatric pathologists, pediatric hospitals, anatomic pathologists and those

in training as well as those in related legal professions.

The Maze Jun 04 2020 When the King died, leaving his throne to whoever succeeds in a quest, Prince Tor and his brothers readily accepted the challenge. Now that Tor has lost friends, and at least one brother, attitudes have changed. When a clue required them to find 'a guide from another world', a witch dragged a young woman from her own world to a land filled with magic, mythical creatures and dangerous monsters. Having convinced her to aid him in his quest, Prince Tor and his companions have successfully procured the latest clue and are one step closer to obtaining the throne. Now they have to persuade her to go through agony in order to find the next clue, or another guide must be found. When they discover that they need to enter a maze, from which nobody has ever escaped, one of the team must be left behind. Once inside the maze, they will need to solve a series of puzzles to continue the quest, with death being the penalty for each wrong answer. Nobody is safe, as one of Tor's brothers finds out the hard way, and Tor discovers that he cannot trust all of his friends when he uncovers a betrayal. A chance remark leads to one of the team finding out that the quest has a twist, making it even more deadly than any of those taking part could ever have imagined. Tor's Quest is a 4 part series, starting with The Guide. Books 3 and 4 have been written and will be published early 2012.

Factors Associated with Infant Mortality Dec 31 2019

Human Longevity: the Major Determining Factors Sep 07 2020 Two thousand years ago, the average life expectancy from birth to death of a Roman citizen, an individual better off than most people at that time, was about 22 years (wars, infectious diseases, trauma, etc.). This progressively increased to about 47 years in the U.S. and most European countries by 1900. Today, the average life expectancy in the U.S. is 78 years (women about five years more than men). However, unless the obesity pandemic is reversed and lifestyles improved, the average life expectancy will likely decrease significantly. conversely, if our lifestyles improve, the average life expectancy could reach 85 or more years. Growing older does not necessarily mean growing sicker. Thus, "don't just add years to your life, add life to your years" (Hans Selve). Indeed, of the 15 major causes of death in the U.S., 65-70% are lifestyle-related. In this book, the following documented topics that are associated with diseases and mortality are discussed in detail: theories of aging; diseases and mortality associated with obesity, physical inactivity and poor nutrition; psychological stress (anxiety, depression); addiction (alcohol, tobacco, drugs); violence (suicide, homicide); food-borne and infectious diseases (viral, bacterial, parasitic); and various other conditions (air pollution, asbestosis, trace metals).
