[An American Philosophy of Social Security](#) Jul 18 2021 Is our system of social security, which involves an annual disbursement of thirty billion dollars, as effective and as equitable as it might be? J. Douglas Brown's analysis of the policies of this program and the philosophy on which it was built offers insights into its relation to our social and political systems. He was one of a small number of people who drafted the original Social Security program enacted in 1935. He views a national welfare system as a necessary adjunct to our national system of social insurance (Social Security, Medicare, etc.) and fears that without it the role of social insurance to prevent dependency may be distorted. Social insurance, according to Dr. Brown, should extend normal self-sufficiency when contingencies interrupt income normally received, whereas public assistance should remain distinct from social insurance and protect those unable to support themselves. Dr. Brown also addresses himself to the questions of graduated income as a source of social insurance revenues, determination of benefits as related to an individual's imputed needs based on his average earnings, and permanent vesting of pension credits accrued under private programs. The most urgent need is for a better distribution of health services to alleviate a situation in which doctors are seemingly more concerned with preserving an obsolete but lucrative system of compensation than with cooperating to reorganize an essential service. [The Law of Contract Damages](#) Aug 07 2020 This is the first work to concentrate solely on damages for breach of contract and provides the most comprehensive and detailed treatment of the subject to date. Written by a commercial barrister and academic for both practitioners and scholars, this text explores the familiar principles and the more recent developments of those principles. To assist understanding and practicality, much of the book is arranged by reference to the type of the complaint (such as the mis-provision of services, the non-payment of money, or the temporary loss of use of property), rather than by the more traditional subject-matter specialisms (eg sale of goods, charterparties, surveyor's negligence). Tort decisions are drawn on to the extent that the applicable principles are the same as or usefully similar to those in contract, and there is also detailed coverage of many practically important but often neglected areas, such as damages for lost management time and the proper evidential approach to proving lost profits.

[New Priorities for Teacher Training and School Curriculum](#) Sep 27 2019 This book had its origins in 1948 when I realized just how profoundly unprepared I was to teach the underachieving students for whom I was responsible. I knew I was only "going through the motions." Consequently I developed an interest in pedagogy,* and particularly in testing the effectiveness of its precepts in the classroom. My Putting Minds to Work, Brown (1972), was an attempt to describe the components of a pedagogy that would help teachers be better prepared. Its underlying theme was the need for greater teacher sophistication in communication. However, a comment by Resnik (1987) on the hiatus in pedagogy between motivation and cognition, led me to realize the potential of communication to bridge that gap. More recently I realized that the New Taxonomy of Marzano and Kendall (2007) enabled me to resolve a problem I had with the Bloom (1956) definition of intellectual ability that appeared so incompatible with current understanding of information processing. Explication of the interrelationships of communication, motivation, and cognition uncovered principles and practices of special significance for

the teaching of students who are on the path of underachievement. I realized the insights gained from that perspective had general application, i.e., to all students.

The Novels of Thomas Hardy Nov 29 2019 What he himself characteristically called 'his idiosyncratic mode of regard' is a factor few readers of Hardy's novels can overlook and one with which all serious students of his fiction must come to terms. The fact that there is nevertheless little final agreement about the nature of his achievement has prompted Miss Vigar to make a fresh study of Hardy's own notes and essays on the art of the novel and to analyse his fictional technique in the light of these unduly neglected observations. Her approach centres on Hardy's pervasive theme of the contrast between appearance and reality and on his frequent use of 'pictorial' devices to express his imaginative vision. She is able to develop a critical account of Hardy's work that can convincingly explain, by reference to the same criteria, both its strengths and its weaknesses, its successes and failures.

Racing to the Bottom? Apr 14 2021 The spectre of a "race to the bottom" is increasingly prominent in debates about globalization and also within federal systems where the mobility of both capital and individuals prompts fears of interjurisdictional competition with respect to taxes and environmental and welfare standards. While there has been no shortage of either political rhetoric or academic theorizing on this subject, empirical studies have been in shorter supply. This volume seeks to fill that gap by asking: Are Canadian provinces engaged in a race to the bottom and, if so, what are the consequences? It will be of interest to public policy practitioners, as well as to students and scholars of economics and political science.

Considering Emotions in Critical English Language Teaching Oct 28 2019 Groundbreaking in the ways it makes new connections among emotion, critical theory, and pedagogy, this book explores the role of students' and teachers' emotions in college instruction, illuminating key literacy and identity issues faced by immigrant students learning English in postsecondary institutions. Offering a rich blend of, and interplay between, theory and practice, it asks: How have emotions and affect been theorized from a critical perspective, and how might these theories be applied to English language teaching and learning? What do complex and shifting emotions, such as hope, disappointment, indignation, and compassion, have to do with English language teaching and learning in the neoliberal context in public universities? How might attention to emotions lead to deeper understanding of classroom interactions and more satisfying educational experiences for English language teachers and students? These questions are addressed not just theoretically, but also practically with examples from college classes of assigned readings, student writing, and classroom talk in which various emotions came into play. Thought-provoking, accessible, and useful, this is a must-read book for scholars, students, and teachers in the field of English language teaching.

False-memory Creation in Children and Adults Aug 19 2021 As one of the most hotly debated topics of the past decade, false memory has attracted the interest of researchers and practitioners in many of psychology's subdisciplines. Real-world issues surrounding the credibility of memories (particularly memories of traumatic events, such as sexual abuse) reported by both children and adults have been at the center of this debate. Were the adults actually retrieving repressed memories under the careful direction of psychotherapists, or were the memories being "created" by repeated suggestion? Were children telling investigators about events that actually happened, or were the interviewing techniques used to get at unpleasant experiences serving to implant memories that eventually became their own? There is evidence in the psychological research literature to support both sides, and the potential impact on individuals, families, and society as a whole has been profound. This book is an attempt to cut through the undergrowth and get at the truth of the "recovered memory/false-memory creation" puzzle. The contributors review seminal work from their own research programs and provide theory and critical evaluation of existing research that is necessary to translate theory into practice. The book will be of great value to basic and applied memory researchers, clinical and social psychologists, and other professionals working within the helping and legal professions.

The Instrumental University Jul 26 2019 In *The Instrumental University*, Ethan Schrum provides an illuminating genealogy of the educational environment in which administrators, professors, and students live and work today. After World War II, research universities in the United States underwent a profound mission change. The Instrumental University combines intellectual, institutional, and political history to reinterpret postwar American life through the changes in higher education. Acknowledging but rejecting the prevailing conception of the Cold War university largely dedicated to supporting national security, Schrum provides a more complete and contextualized account of the American research university between 1945 and 1970. Uncovering a pervasive instrumental understanding of higher education during that era, *The Instrumental University* shows that universities framed their mission around solving social problems and promoting economic development as central institutions in what would soon be called the knowledge economy. In so doing, these institutions took on more capitalistic and managerial tendencies and, as a result, marginalized founding ideals, such as pursuit of knowledge in academic disciplines and freedom of individual investigators. The technocratic turn eroded some practices that made the American university special. Yet, as Schrum suggests, the instrumental university was not yet the neoliberal university of the 1970s and onwards in which market considerations trumped all others. University of California president Clark Kerr and other innovators in higher education were driven by a progressive impulse that drew on an earlier tradition grounded in a concern for the common good and social welfare.

International Perspectives on Spinal Cord Injury Oct 09 2020 "Every year between 250 000 and 500 000 people suffer a spinal cord injury, with road traffic crashes, falls and violence as the three leading causes. People with spinal cord injury are two to five times more likely to die prematurely. They also have lower rates of school enrollment and economic participation than people without such injuries. Spinal cord injury has costly consequences for the individual and society, but it is preventable, survivable and need not preclude good health and social inclusion. Ensuring an adequate medical and rehabilitation response, followed by supportive services and accessible environments, can help minimize the disruption to people with spinal cord injury and their families. The aims of *International perspectives on spinal cord injury* are to: ---assemble and summarize information on spinal cord injury, in particular the epidemiology, services, interventions and policies that are relevant, together with the lived experience of people with spinal cord injury; ---make recommendations for actions based on this evidence that are consistent with the aspirations for people with disabilities as expressed in the Convention on the Rights of Persons with Disabilities.

Understanding Second Language Learning Difficulties Sep 07 2020 The insights, techniques and skills needed to understand why some adult students have difficulties with learning a second language are presented in this book. The author's premise is that what appears on the surface is often not the real source of the learner's difficulty. A correct diagnosis of the cause of the problem is important if intervention is to prove effective. The book presents a large number of theories and models of learning, and covers areas including: learning styles and personality dispositions; student motivation, self-efficacy and anxiety; and how to interview students.

Post-Olympism May 28 2022 The Olympic ideal and the Olympic Games stand as symbols of global cooperation, international understanding and the bonding of individuals through the medium of sports. However, throughout the twentieth century, Olympic rhetoric was often confronted by a different reality. The Games have regularly been faced by crises that have threatened the spirit of Olympism and even the Games themselves. Given the many changes that have occurred in the Olympic Games during the past century it seems reasonable to ask if this global event has a future and, if so, what form it might take. With this larger issue in mind, the authors of *Post-Olympism?* ask probing questions about the following: the infamous 1936 Olympics the effect of new technologies on the Games the future impact of the 2008 Beijing Games on China and of China on the Olympics the local and regional impact of the Sydney green Olympics the Games and globalization Disneyfication racism drug abuse The book provides a useful overview of the ongoing significance of the Olympics and will be essential reading for anyone with a serious interest in the Games.
