[Developing Quality in Personal Social Services Sep 07 2020](#)
First published in 1997, this volume is about the challenge of introducing business-originated concepts of quality assurance, personal social services are currently confronted with all over Europe. Undoubtedly, the new orientation towards a more business-like approach in social welfare settings will raise professionalism, "client-orientation" and controlling (instead of mere inspection). There

is evidence, however, that the specificities of personal social services are not always taken into account if it comes to introducing market values and mechanisms. Due to this development it becomes essential to promote more adequate criteria for quality standards in the very field of personal social services. The challenge is to maintain a certain standard of service provision while at the same time reconsidering the preconditions for defining quality. This will imply the search for a consensus between allegedly diverging approaches, i.e. between their different basic

concepts, aims and standards. Given the social and economic context within which these developments are taking place, the focus of the contributions is on their critical assessment in different European countries. An overview is given about national developments in the areas of care for older persons and other social services. The contributors from Austria, Belgium, Denmark, Finland, Germany, Italy, the Netherlands, Norway, Sweden, and the UK look at how and by whom quality is defined and what challenges the actors of the traditionally mixed economy of

personal social services are meeting. Empirical evidence about user involvement and satisfaction is given but also theoretical reasoning about the impact of business approaches on a "public good". Thus, the book tries to fill an important gap in practice, research and policy-making concerning personal social services and quality issues.

being actively encouraged to introduce the BSI's quality assurance standard BS5750. Universities and schools are also attracted by a standard which should improve, if not quality itself, then the management of quality. This book presents an overview of the pitfalls and problems of implementing quality standards in education. It explores theoretical issues, such as the relationship between the customer and academic culture. It also has a strong practical theme, looking at the advantages and disadvantages of quality systems, case studies of

attempts at implementation and proposals for future developments across the education sector as a whole.

Handbook of
Quality Assurance
for University

Teaching Jul 30

2022 This practical and authoritative handbook provides a comprehensive overview of the issues and approaches to assuring quality in university teaching. Including contributions from major international figures, the book contains a wealth of ideas and practical advice to help

universities commit to quality in teaching and offers insights into how the topics raised can be directly applied. The book initially identifies some of the key issues surrounding the topic, such as the evidence-based identification of teaching quality; the training of university lecturers and faculty; external and internal quality assurance; the tension between professional autonomy and governmental regulation; and the involvement of students in developing quality. It then moves on to present ideas and initiatives to address these problems, tackling the subject through

four sections:

Assuring Quality - questioning what quality assurance means and how it might be practised; Identifying Quality - examining what knowledge exists at present and how it might be further researched; Developing Quality - investigating the development of staff through teacher training and appraisal; Case Studies of Quality Assurance - reviewing six case studies of quality assurance in a range of contrasting subjects including the professional subjects of Medicine, Nursing and Teacher Training which are also addressed systemically in the first section.
