Urban Governance in Transition Nov 29 2019 This book offers readers a comprehensive introduction to the functions of the government in contemporary China. Further, it creates a framework to describe urban governance in today's China, which consists of four basic modes: the omnipotent government mode, autonomous governance mode, integrated governance mode and cooperative governance mode. The book defines a "city" as a gathering place for high-quality public service resources, and the basic task of urban governance is to provide high-quality public services and maintain the sustainability of fiscal revenues. By focusing on current "hot topics" in urban governance in China, including the institutional development of urban governance, model interpretation, city/county relationship, cross-border governance, cross-sectoral coordination, street management, community service

provision, and municipal performance evaluation, it clarifies a number of common misunderstandings in the field of urban management and practice. Lastly, the book analyses the current integrated governance model used in Chinese cities, which relies on the authority of the government and integrates the market and social subjects across borders by means of qualification identification, resource support, elite absorption, party-group embeddedness, and project cooperation. However, this model is currently facing several problems. In order to address the potential risks of integrated governance, the book argues that we need to develop new institutional arrangements based on collaborative governance.

IBM and Cisco: Together for a World Class Data Center Aug 19 2021 *This IBM® Redbooks® publication is an IBM and Cisco collaboration that articulates how IBM and Cisco can bring the benefits of their respective companies to the modern data center. It documents the architectures, solutions, and benefits that can be achieved by implementing a data center based on IBM server, storage, and integrated systems, with the broader Cisco network. We describe how to design a state-of-the art data center and networking infrastructure combining Cisco and IBM solutions. The objective is to provide a reference guide for customers looking to build an infrastructure that is optimized for virtualization, is highly available, is interoperable, and is efficient in terms of power and space consumption. It will explain the technologies used to build the infrastructure, provide use cases, and give guidance on deployments.*

Ruggles Center Plaza: Proposal for Landscape Architecture and Engineering Services Jun 04 2020 *This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it.
