[Access and Benefit Sharing of Genetic Resources, Information and Traditional Knowledge](#) Nov 09 2020 Addressing the management of genetic resources, this book offers a new assessment of the contemporary Access and Benefit Sharing (ABS) regime. Debates about ABS have moved on. The initial focus on the legal obligations established by international agreements like the United Nations Convention on Biological Diversity and the form of obligations for collecting physical biological materials have now shifted into a far more complex series of disputes and challenges about the ways ABS should be implemented and enforced. These now cover a wide range of issues, including: digital sequence information, the repatriation of resources, technology transfer, traditional knowledge and cultural expressions, open access to information and knowledge, naming conventions, farmers' rights, new schemes for accessing pandemic viruses sharing DNA sequences, and so on. Drawing together perspectives from an interdisciplinary range of leading and emerging international scholars, this book offers a new approach to the ABS landscape; as it breaks from the standard regulatory analyses in order to explore alternative solutions to the intractable issues for the Access and Benefit Sharing of genetic resources. Addressing these modern legal debates from a perspective that will appeal to both ABS scholars and those with broader legal concerns in the areas of intellectual property, food, governance, Indigenous issues, and so on, this book will be a useful resource for scholars and students as well as those in government and in international institutions working in relevant areas.

Playful Learning Lab for Kids Mar 26 2022 Playful Learning Lab for Kids is a hands-on activity book that offers games and activities that revolve around the senses and concepts in reading, math, art, and science. Recent research has shown that children learn and develop new skills more quickly when they engage in playful, whole body activities. Movement allows them to refocus their attention, improves brain function, reduces stress, and improves circulation. Not only that, but the more senses that are used for learning, the more likely information is to be stored and retrieved. The activities in Playful Learning Lab for Kids explore concepts in reading, language, math, art, music, science, geography, and social studies, all while engaging children with movements, touch, sound, and sight. Most distinguishing of all, the activities and lessons here include suggestions for tailoring the experience to different levels, making it a book children can grow with. The skills range from visual perceptual skills and spatial awareness, to early geometry concepts, visual motor integration, and fine motor skills. Authors Claire Heffron and Lauren Drobnyak, pediatric occupational and physical therapists with years of experience in clinical and school-based settings, share their best tips and strategies for helping little learners reach their fullest potential through these engaging and fun activities. The popular Lab for Kids series features a growing list of books that share hands-on activities and projects on a wide host of topics, including art, astronomy, clay, geology, math, and even how to create your own circus—all authored by established experts in their fields. Each lab contains a complete materials list, clear step-by-step photographs of the process, as well as finished samples. The labs can be used as singular projects or as part of a yearlong curriculum of experiential learning. The activities are open-ended, designed to be explored over and over, often with different results. Geared toward being taught or guided by adults, they are enriching for a range of ages and skill levels. Gain firsthand knowledge on your favorite topic with Lab for Kids.

[The Change Laboratory for Teacher Training in Entrepreneurship Education](#) Aug 31 2022 This open access book illustrates a new type of formative intervention for in-service teacher training in entrepreneurship education. The book describes a Change Laboratory and shows how teachers and workshop assistants develop the idea of a multidisciplinary project entailing the design of a self-service and parking lot in a dismissed area close to the city centre. The multidisciplinary project is taken as example of how an idea is debated and turned into collective action and change, the very essence of initiative and entrepreneurship. The Change Laboratory thus increases the participation of students, teachers and stakeholders in the school towards a new curriculum through the implementation of a multidisciplinary project connecting school with the world outside and working life. The book features a foreword by Luke Pittaway, USASBE Entrepreneurship Educator of 2018. The manuscript discusses key concepts of Cultural Historical Activity Theory's Change Laboratory as a formative intervention in a coherent and accessible manner. Beyond that it carefully illustrates how the Change Laboratory and its principles of double stimulation and ascending from the abstract to the concrete can be used as a theory of change to address one of the difficult and new demands of the European Union's New Skills Agenda. The author takes the reader through the expansive learning journey and uses strong evidence to show how a new object can be developed, and how associated tensions and contradictions can be surfaced and tackled by actors with a partially shared object, and how a new concept can be formed and enriched through implementation and reflection in a manner that generates collective transformative agency. (Reviewer) This project has received funding from the European Union's Horizon 2020 research and innovation programme under the Marie Skłodowska-Curie Grant Agreement No. 654101.

Current Practices in Workplace and Organizational Learning Dec 23 2021 The central assumption that guides this book is that research and practice about learning at the workplace has recently lost its critical edge. This book explores what has happened to workplace learning and organizational learning and studies what has replaced it. In addition, the book discusses to what extent there are reasons to revitalize it. Today, themes such as 'innovation', 'co-creation' and 'knowledge sharing' seem to have become preferred and referred to as theoretical fields as well as fields of practice. In several chapters of this book it is argued that the critical power of learning could be regained by starting a new discussion of how these new fields of practice can be substantiated by topics such as learning arrangements, learning mechanisms, and learning strategies. Hence, the aim of this book is to both advance and recapture our knowledge of learning in today's increasingly complex world of work and organizing. The contributions in this work do so by revisiting classic research on workplace and organizational learning and discussing how insights from this body of literature evokes new meaning. It sets the stage for new agendas and rethinks current practices that are entangled in activities such as innovation, co-creation, knowledge sharing or other currently widespread fields of practice.
