Technologies of Vision Mar 28 2022 An investigation of the computational turn in visual culture, centered on the entangled politics and pleasures of data and images. If the twentieth century was tyrannized by images, then the twenty-first is ruled by data. In Technologies of Vision, Steve Anderson argues that visual culture and the methods developed to study it have much to teach us about today's digital culture; but first we must examine the historically entangled relationship between data and images. Anderson starts from the supposition that there is no great divide separating pre- and post-digital culture. Rather than creating an insular field of new and inaccessible discourse, he argues, it is more productive to imagine that studying "the digital" is coextensive with critical models—especially the politics of seeing and knowing—developed for understanding "the visual." Anderson's investigation takes on an eclectic array of examples ranging from virtual reality, culture analytics, and software art to technologies for computer vision, face recognition, and photogrammetry. Mixing media archaeology with software studies, Anderson mines the history of technology for insight into both the politics of data and the pleasures of algorithms. He proposes a taxonomy of modes that describe the functional relationship between data and images in the domains of space, surveillance and data visualization. At stake in all three are tensions between the totalizing logic of data and the unruly chaos of images.

Mergers and Acquisitions Oct 30 2019 Mergers and acquisitions occur for many legitimate reasons and should be encouraged as a matter of general policy, yet the resulting increase in the level of market concentration and market strength can lead to concerns that certain 'deals' may irreparably damage the market structure and create anti-competitive effects. This volume explores the competition concerns arising out of mergers and acquisitions, the reasons for merger control and the fundamental options that face all jurisdictions intent on implementing an effective merger control regime. The volume acts as a guide through the development of merger control law, policy and scholarly thought and includes commentary on each of the key stages of any effective merger control regime. The articles consider the objectives of merger control and the broader political landscape within which mergers take place; the procedural issues in merger control, including jurisdictional matters and due process; the different substantive legal standards incorporated into merger control; the relevant theories of harm and the appropriate treatment of efficiencies; and the use of remedies in merger control. The chosen articles mainly, but not exclusively, focus on the US and EU, and several adopt a cross-disciplinary approach encompassing law, political science and economics.
