Manual of Standardization in the Romance Languages 2021 Language standardization is an ongoing process based on the notions of linguistic correctness and models. This manual contains thirty-six chapters that deal with the theories of linguistic norms and give a comprehensive up-to-date description and analysis of the standardization processes in the Romance languages. The first section presents the essential approach to the concept of linguistic norm ranging from antiquity to the present, and includes individual chapters on the notion of linguistic norms and correctness in classical grammar and rhetoric, in the Prague School, in the linguistic theory of Eugenio Coseriu, in sociolinguistics as well as in pragmatics, cognitive and discourse linguistics. The second section focuses on the application of these notions with respect to the Romance languages. It examines in detail the normative grammar and the normative dictionary as the reference language codification and modernization of those languages that have a long and well-established written tradition, i.e. Romanian, Italian, French, Catalan, Spanish, and Portuguese. Furthermore, the volume offers a discussion of the key issues regarding the standardization of the 'minor' Romance languages as well as Creoles.

T-62 Main Battle Tank 1965-2005 25 2019 The Soviet Army hastily developed the T-62 in a struggle to compete against the rapid proliferation of NATO tanks in the 1960s. It was essentially a modification of the widely-manufactured T-55 tank with the addition of a new 115mm gun. Within the USSR itself, the T-62 quickly superseded, but it was widely exported, becoming a critical component of the Egyptian and Syrian armies in the 1973 Yom Kippur conflict and heavily influenced later designs of the M1 Abrams and Challenger tanks. In the first English-language history of this tank, Steven Zaloga examines the development of the tank using detailed combat descriptions to bring to life the operational history of this tank from the desert of Sinai to the harsh terrain of Afghanistan.

Riegel's Handbook of Industrial Chemistry May 01 2020 The aim of this book is to present in a single volume an up-to-date account of the chemistry and chemical engineering which underlie the major areas of the chemical process industry. This most recent edition includes several new chapters which comprise important threads in the industry's total fabric. These new chapters cover waste minimization, safety considerations, chemical plant design and operation, emergency response planning, and statistical applications in quality control and experimental planning. Together with the chapters on chemical industry economics and wastewater treatment - they provide a unifying base on which the reader can most effectively apply the information provided in the chapters which describe the various areas of the chemical process industry. The ninth edition of this established reference work contains the contributions of some fifty experts from industry, government, and academe. I have been humbled by the breadth and depth of their knowledge and expertise, and by the willingness and enthusiasm with which they shared their knowledge and insights. They have, with

exception, been unstinting in their efforts to make their respective chapters as complete and informative as possible within the space available. Errors of omission, duplication, and shortcomings in organization are a mine. Grateful acknowledgment is made to the editors of technical journals and publishing houses for their permission to reproduce illustrations and other materials and to the many industrial concerns which have contributed drawings and photographs. Comments and criticisms by readers will be welcome.

Soviet T-62 Main Battle Tank Sep 16 2021 The T-62 is one of the most widespread tanks used by the Soviet Union during the Cold War. Developed from the T-55, the T-62 enjoyed a long career in the Red Army and even in the early days of the reformed Russian Army. It was the principal tank used by Soviet forces in the Soviet-Afghan War, and went on to see service with Russian forces in Chechnya and South Ossetia. It has also been employed in almost every conflict in the Middle East and Africa from its introduction into service. It remains in service with many countries throughout the world and has seen a great deal of use in the Syrian Civil War. Containing more than 400 stunning contemporary and modern photographs, and written by two experts on Soviet armour, this authoritative book tells the complete story of the T-62.

UHPCC Under Impact and Blast Aug 15 2021 This book is about the Ultra-high Performance Cementitious Composites (UHPCC), which is a relatively new type of cementitious materials. UHPCC has very low water binder ratio, high amount of high-range water reducer, fine aggregates and high-strength steel or organic fibers. With the prominent mechanical properties, e.g., high compressive and tensile strength, high ductility and high fracture energy, UHPCC has been becoming the most prospective construction cement-based material for both civil and military structures to resist high-speed projectile penetration, low-velocity impact and blast loadings. In this book, the related work conducted by authors on the static and dynamic mechanical properties, as well as the impact and blast resistance of UHPCC are presented. This book is written for researchers, engineers and graduate students in the fields of protective structures and terminal ballistics.

Guidelines for Reporting Health Research Sep 04 2020 Guidelines for Reporting Health Research is a practical guide to choosing and correctly applying the appropriate guidelines when reporting health research to ensure clear, transparent, and useful reports. This new title begins with an introduction to reporting guidelines and an overview of the importance of transparent reporting, the characteristics of good guidelines and how to use reporting guidelines effectively in reporting health research. This hands-on manual also describes over a dozen internationally recognised published guidelines such as CONSORT, STROBE, PRISMA and STARD in a clear and easy to understand format. It aims to help researchers choose and use correct guidelines for reporting their research, and to produce more completely and transparently reported papers which will help to ensure reports are more useful and are not misleading. Written by the authors of health research reporting guidelines, in association with the EQUATOR (Enhancing the Quality and Transparency Of health Research) Network, Guidelines for Reporting Health Research is a helpful guide to producing publishable research. It will be a valuable resource for researchers in their role as authors and an important reference for editors and peer reviewers.
