Processing interclausal Relationships Nov 20 2021 During the last

10 years, more and more linguistic and psycholinguistic research has been devoted to the study of discourse and written texts.

Much of this research deals with the markers that underline the connections and the breaks between clauses and sentences plus

the use of these markers -- by adults and children -- in the

production and comprehension of oral and written material. In

this volume, major observations and theoretical views from both

sides of the Atlantic are brought together to appeal to a wide

range of linguists, psychologists, and speech therapists. The

volume presents contributions from researchers interested

specifically in adult language and from others concerned with

developmental aspects of language. Some contributors deal

primarily with production, whereas others concentrate on

comprehension. Some direct their attention to oral discourse

while others focus on written texts. To preserve overall

coherence, however, the contributors were given the following

recommendations: \* With regard to the level of linguistic analysis, the emphasis should be on the clause level -- more particularly, on the relationships between clauses. \* Special emphasis should also be placed on linguistic markers (e.g., connectives, markers of segmentation, punctuation). \* An overview of a given field of research should be offered, and current research should be put into perspective. \* For contributors in the developmental field, attention should be paid to the fact that an account of the acquisition of some language functions throughout childhood should be included only if general principles of interclause relations that might be masked by the exclusive examination of adult evidence could be derived from it.

In addition to core sections on topics such as training, assessment, diagnosis, and intervention, the handbook includes chapters devoted to emerging issues in the clinical field, including health care reforms, cultural factors, and technological innovations and challenges. **Childhood Aggression and Violence** Apr 13 2021 The conference on which this volume is based was one of a series of symposia initiated by the Department of Psychology at the University of Hawaii at Manoa on the theory and research surrounding topics of interest to the faculty and germane to the Hawaiian community. In order to encourage interaction around specific themes, the symposium series has assembled a small, select group of scholars to exchange knowledge, ideas, and enthusiasm with the resident faculty, students, and the community at large. The first two symposia concentrated on cross-cultural themes (Marsella, Tharp, & Ciborowski, 1979; Marsella, DeVos, & Hsu, 1985). The third one addressed a significant social problem: aggression and violence in children. At the time that our plan was being developed, Hawaii, along with mainland states, was experiencing or at least expressing widespread alarm over the involvement of children and youth in violent crime, in belligerence at school, as perpetrators of aggression at home, and as victims of physical abuse. This symposium was planned around a major area within the department, the Clinical Studies Program. The Clinical Studies Program has developed along two interrelated lines of concentration: one emphasized the foundation of clinical psychology in basic science and the other expanded its purview into the broader community, covering prevention, systems change, and social networks.

**Treatment for Children with Selective Mutism** Jul 17 2021

Selective Mutism (SM) is an impairing behavioral condition in which a child fails to speak in certain social situations despite speaking regularly and normally in other situations. SM presents a significant mental and public health problem due to impact on the social, emotional, and academic functioning of young children at a critical point in their development. SM is closely related to childhood social phobia, but it cannot be treated in the same way because of the young age of the children affected, their lack of speech in the treatment setting, and the need for significant school involvement in treatment. *Treatment for Children with Selective Mutism* outlines the sequence and essential elements to guide clinicians through a comprehensive, integrated program for young children who display symptoms of SM. This approach utilizes behavioral interventions targeting gradual increases in speaking across settings in which the child initially has difficulty. The integrated nature of the therapy refers to the goal of incorporating input from the clinician with that from the parents and teacher, as well as others impacted by the lack of speech. Exposure exercises are based on behavioral techniques such as stimulus fading, shaping, and systematic desensitization that also allow for a less intense or gradual exposure to the speaking situation. These techniques are combined and used flexibly with a behavioral reward system for participation in treatment. The approach was developed by Dr. R. Lindsey Bergman as part of the UCLA Childhood OCD, Anxiety, and Tic Disorders Program. The treatment protocol consists of 20 sessions, 60 minutes each, delivered over the course of 24 weeks. *Treatment for Children with Selective Mutism* is an invaluable guide for mental health

The text is designed to provide a comprehensive introduction to child maltreatment by disseminating current knowledge about the various types of violence against children. By helping students understand more fully the etiology, prevalence, treatment, policy issues, and prevention of child maltreatment, the authors hope to further our understanding of how to treat child maltreatment victims and how to prevent future child maltreatment.

Conventionality in Cognitive Development: How Children Acquire Shared Representations in Language, Thought, and Action Nov 08 2020 An important part of cognitive development is coming to think in culturally normative ways. Children learn the right names for objects, proper functions for tools, appropriate ways to categorize, and the rules for games. In each of these cases, what makes a given practice normative is not naturally given. There is not necessarily any objectively better or worse way to do any of these things. Instead, what makes them correct is that people agree on how they should be done, and each of these practices therefore has an important conventional basis. The chapters in this volume highlight the fact that successful participation in practices of language, cognition, and play depends on children's ability to acquire representations that other members of their social worlds share. Each of these domains poses problems of identifying normative standards and achieving coordination across agents. This volume brings together scholars from diverse areas in cognitive development to consider the psychological mechanisms supporting the use and acquisition of conventional knowledge. This is the 115th volume of the quarterly report series *New Directions for Child and Adolescent Development*.
