[Medical Surgical Nursing Care](#) Jan 13 2021 The need for nurses is greater than ever before. There are no short-term solutions to this problem: as currently practicing nurses age and retire, so does the population as a whole, further increasing the need for health care services. Today, more than ever before, we need you, the nursing student, to succeed in your studies. Today, more than ever before, we need you, the nursing student, to enter the nursing profession. Today, more than ever before, we need you, the nursing student, to see nursing as a career, not just a job. This book is dedicated to your success as a student and as a practicing nurse. We believe a strong foundation in understanding the common diseases and disorders that affect adult clients is necessary to provide effective nursing care. We believe that understanding the basis for nursing care activities is vital to providing individualized care for clients. We believe that client teaching is a vital nursing role at all levels and in all settings. Understanding comes not through memorization, but through practice and integration of new material into your

thinking. Medical-Surgical Nursing Care promotes understanding in several ways. The writing style is clear, with a focus on readability. Its content is streamlined but thorough, focusing on what you need to know and to be able to do. Organization Medical-Surgical Nursing Care is organized to promote learning. Part One, Medical-Surgical Nursing Practice, focuses on concepts, issues, and nursing care applicable to caring for adults in many different situations and settings. Parts Two through Seven focus on diseases and disorders affecting adults. These disorders are organized by functional health patterns (for example, nutritional-metabolic, activity-exercise) and by affected body systems under each functional health pattern (for example, common skin problems, bowel disorders, cardiac disorders). Each chapter begins with a Caring Tip that provides words of wisdom from the lived experience of a practicing nursing or nurse educator. You will be able to use these tips as you move into and through your career in nursing. Learning Outcomes help focus and define your learning as you read and study the material. The structure and function of the affected body system is reviewed at the beginning of the chapter. Disorders affecting that body system are presented in a consistent format: the disorder is defined; its Pathophysiology, signs and symptoms, and complications are explained; and Collaborative Care (including diagnostic tests, pharmacology, surgery, and other treatments) for the disorder is outlined. Nursing Care related to the disorder is presented in a nursing process format. When a disorder is major, very complex, or very common, all of the Nursing Process steps are provided. When it is not, the text provides an abbreviated, more focused discussion, similar to the focused assessment nurses perform. Because teaching is a vital nursing role, discussion of each disorder concludes with Discharge Considerations and teaching for the client and family. Case Studies following many major disorders bring the disorders to life. Clients rarely arrive in a health care setting as a pure medical diagnosis. As humans, clients bring all their roles and responsibilities as individuals, spouses, parents, children, workers, students, friends, and volunteers. They arrive as unique individuals influenced by their ethnicity, culture, and background. They arrive with psychosocial issues such as fear, guilt, or difficulty meeting financial responsibilities. They often arrive with other diseases and disorders complicating the current problem. The case studies in this text emphasize the holistic aspects of nursing care. Critical Thinking Questions conclude each case study. These questions allow you to practice your new found learning and to expand your thinking beyond the immediate focus of the disease or disorder presented. Additional Critical Thinking Self-Check Questions are provided on the CD-ROM throughout nursing care chapters. They provide more case scenarios for you to use to test your knowledge and thinking skills. These self-check questions focus on the nursing roles of collecting assessment data and implementing nursing care. Each case is matched with hints to guide your critical thinking. They will help you learn to individualize your nursing care. Each chapter concludes with features to reinforce and enhance your learning. Key Terms by Topic list the boldfaced key terms in the text by the topic under which they were defined. Key Points provide a summary of chapter content with reminders that you can use throughout your nursing career. For Further Study is a handy listing of cross-references within the chapter and the topics to which they apply. An interactive Critical Thinking Care Map provides a brief case study, assessment data, and a nursing diagnosis for a specific client. We then ask you, the student, to sort the data and sample interventions, evaluate the results, and chart your findings. Finally, NCLEX-PN Review Questions and a Test-Taking Tip help you review the chapter material and practice your test-taking skills. Features Throughout each chapter, you will find consistent features to facilitate and reinforce your learning. To avoid interrupting your reading by reaching for your medical dictionary, Key Terms are presented in boldface type. They are defined in the text and the glossary at the end of the book. Other important or unfamiliar terms are italicized and defined in the text. Clinical Alerts within the text emphasize information critical to providing effective, safe clinical nursing care. Cultural Care Strategies, including nursing implications and self-reflection questions, prepare students to deliver culturally sensitive adult nursing care. Color-coded boxes organize highlighted information for quick retrieval: red Data Collection boxes for manifestations and risk factors of a disorder; blue Nursing Care boxes for nursing care related to specific tests or procedures; orange boxes highlighting Client Teaching; and green

boxes focusing on specific Population Groups and Nutrition information. Nursing Care Checklists quickly summarize nursing care activities for particular procedures or surgeries. Procedure Checklists review key steps in performing previously learned nursing care procedures and provide Sample Documentation. Pharmacology Tables highlight nursing implications and client teaching for drugs used to treat particular disorders.
