Auto Racing in the Shadow of the Great

War Sep 03 2022 From 1915 through the early 1920s, American auto racing experienced rapid and exciting change. Competition by European vehicles forced American car manufacturers to incorporate new features, resulting in legendary engineering triumphs (and, essentially, works of art). Some of the greatest drivers in racing history were active during this time--Ralph DePalma, Dario Resta, Eddie Rickenbacker, the Chevrolet brothers, Jimmy Murphy. Presenting dozens of races in detail and a wealth of engineering specs, this history recalls the era's cigar-shaped speedway specials and monumental board tracks, the heavy-footed drivers, fearless mechanics, gifted engineers and enthusiastic backers.

[Auto Racing Comes of Age](#) Nov 12 2020 The first quarter of the 20th century was a time of dramatic change in auto racing, marked by the move from the horseless carriage to the supercharged Grand Prix racer, from the gentleman driver to the well-publicized professional, and from the dusty road course to the autodrome. This history of the evolution of European and American auto racing from 1900 to 1925 examines transatlantic influences, early dirt track racing, and the birth of the twin-cam engine and the straight-eight. It also explores the origins of the Bennett and Vanderbilt races, the early career of "America's Speed King" Barney Oldfield, the rise of the speedway specials from Marmon, Mercer, Stutz and Duesenberg, and developments from Peugeot, Delage, Ballot, Fiat, and Bugatti. This informative work provides welcome insight into a defining period in motorsports.

Hemi Muscle Cars Oct 31 2019 Since the early years of the internal combustion engine, engineers recognized that the hemispherical head design, which utilized dome-shaped combustion chambers, generated phenomenal horsepower. During World War II, Chrysler developed this extremely powerful engine design for tanks and other military vehicles. After the war the company applied this technology to a 330-cubic-inch V-8 destined for its 1951 production cars. This engine became so dominant on America's racetracks and boulevards that its nickname--Hemi--came to symbolize the ultimate in American performance. Hemi Muscle Cars tells the story of the magnificent Hemi-powered performance cars and explains why the Hemi has blown away the competition for six decades--and still does so today. More importantly, the book shows how this potent engine became a cultural icon, how it came to define American performance cars.

A Life Awheel Sep 30 2019 Born in Shropshire soon after the end of the First World War, venerable motoring writer W de Forte has driven everything from his grandfather's first Daimler, to modern-day supercars ... ridden everything from vertiginous Victorian penny farthings, to high velocity twenty-first century superbikes ... travelled everywhere from the

permafrost of the Arctic Circle to the baking sands of the Baja Peninsula ... and met everyone from Tazio Nuvolari to Valentino Rossi. W de Forte enjoyed an eventful career as a top-level journalist, spanning 75 years, during which time he tested many thousands of cars and reported on countless automotive events around the world. This made him uniquely qualified to comment on all aspects of classic and vintage motoring and motorcycling. Relatively undimmed by age and age, even in his 90s, de Forte had no plans to retire, but, in early 2011, a high-speed prang while testing a wayward Rudge Ulster at a racing circuit in Belgium brought him up with a jolt, both literally and metaphorically. After recuperating in hospital, he settled down to write his long-awaited and much requested autobiography. This unique and insightful book is the result. Packed with fascinating stories about classic cars and motorcycles, *A Life Awheel* - the 'Auto' Biography of W de Forte is an account of an extraordinary motoring life, and the story of motoring in the 20th century.

Automotive Electricity Jul 29 2019 Since the beginning of the century, electrical goods have

invaded our everyday lives. Now, electric power is coming to be seen as a solution to the pollution caused by cars. While this transition has remained very slow during the last ten years, it has been accelerating as the statutory constraints and needs of the market have changed. Even if the electric car itself fails to dominate the market, electric traction is taking an important place in our drive to move away from gas-powered vehicles. Another solution, hybrid vehicles, combine two sources of energy (electric and chemical), reducing the global consumption of fossil fuels. Fuel cell vehicles are also one of the most promising technologies

for the future, with the capacity to use any fuel - hydrogen being the ideal fuel ecologically, but constrained by infrastructure and storage issues. This book explores all these different solutions for moving our vehicles from fossil fuel consumption to new, more environmentally-friendly power sources.
