Quantitative Geosciences: Data Analytics, Geostatistics, Reservoir Characterization and Modeling Dec 31 2019 Earth science is becoming increasingly quantitative in the digital age. Quantification of geoscience and engineering problems underpins many of the applications of big data and artificial intelligence. This book presents quantitative geosciences in three parts. Part 1 presents data analytics using probability, statistical and machine-learning methods. Part 2 covers reservoir characterization using several geoscience disciplines: including geology, geophysics, petrophysics and geostatistics. Part 3 treats reservoir modeling, resource evaluation and uncertainty analysis using integrated geoscience, engineering and geostatistical methods. As the petroleum industry is heading towards operating oil fields digitally, a multidisciplinary skillset is a must for geoscientists who need to use data analytics to resolve inconsistencies in various sources of data, model reservoir properties, evaluate uncertainties, and quantify risk for decision making. This book intends to serve as a bridge for advancing the multidisciplinary integration for digital fields. The goal is to move beyond using quantitative methods individually to an integrated descriptive-quantitative analysis. In big data, everything tells us something, but nothing tells us everything. This book emphasizes the integrated, multidisciplinary solutions for practical problems in resource evaluation and field development.

The Rights of Indigenous Peoples in Marine Areas Aug 26 2019 The question of what rights might be afforded to Indigenous peoples has preoccupied the municipal legal systems of settler states since the earliest colonial encounters. As a result of sustained institutional initiatives, many national legal regimes and the international legal order accept that Indigenous peoples possess an extensive array of legal rights. However, despite this development, claims advanced by Indigenous peoples relating to rights to marine spaces have been largely opposed. This book offers the first sustained study of these rights and their reception within modern legal systems. Taking a three-part approach, it looks firstly at the international aspects of Indigenous entitlements in marine spaces. It then goes on to explore specific country examples, before looking at some interdisciplinary themes of crucial importance to the question of the recognition of the rights of Indigenous peoples in marine settings. Drawing on the expertise of leading scholars, this is a rigorous and long-overdue exploration of a significant gap in the literature.
