Incentives for Domestic Refining Mar 13 2021 The authors argue that, in spite of decades of racial progress and the pervasiveness of multicultural rhetoric, racial judgments are often based not just on skin color, but on how a person conforms to behavior stereotypically associated with a certain race. Specifically, racial minorities are judged on how they "perform" their race: the clothes they wear, the way they style their hair, the institutions with which they affiliate, their racial politics, the people they befriend, date or marry, where they live, how they speak, and their outward mannerisms and demeanor.

Information Systems Outsourcing Jun 03 2020 Four years have been passed away since the first edition of this book has been published. While certain key issues on IS sourcing like determinants and application service provision have become more mature from an academic and industry perspective, additional topics have arisen on the horizon. In particular, offshoring and business process outsourcing have led to numerous insightful publications which offer a valuable and indispensable holistic sourcing perspective. Thus, the second edition of our outsourcing book deals with enduring themes, new perspectives, and global challenges. In addition to classical themes like Sourcing Determinants (Part I), Relationship Aspects (Part II), and Experiences (Part III), we felt it worthwhile to add three new parts. They cover information systems outsourcing from a Vendor and Individual Perspective (Part IV), Application Service Providing (Part V) as well as Offshoring and Global Outsourcing (Part VI). Again we have thoughtfully tried to arrange a compilation of contemporary outsourcing research as a primer and a platform for scientific discourse. In contrast to the first edition, this book is not the outcome of an International Conference, but rather an update of important and relevant perspectives. Since the Third International Conference on Outsourcing of Information Services will take place 2007 in Heidelberg, Germany, it may be considered as an epilogue for further interactions and discussions.

The Offshore World Oct 20 2021 The atlas of contemporary capitalism is curious indeed. A desperately poor and civil-war-wracked nation, Liberia, is the world's shipping superpower; the Cayman Islands the fifth-largest financial center in the world; land-locked Zurich a venerable "offshore" banking center. Indeed, it is estimated that half of the global stock of money passes through tax havens. The logic of the offshore world, where millionaires and corporations roam in search of financial advantage, is slippery. It challenges many conventional assumptions about power and economics. In the single most comprehensive account of the offshore economy, Ronen Palan investigates the legal spaces, unregulated and yet maintained and supported by the state system, that have emerged for purposes of international finance, tax havens, export processing zones, flags of convenience, and e-commerce. The offshore economy had its beginnings in the late nineteenth century, saw early development after the First World War, and metastasized in the 1970s. Palan believes that a rapidly expanding offshore economy is now producing a new market in sovereignty; states have discovered that their rights to write law may be used as a commercial asset. This commercialization of sovereignty, he asserts, undermines the

legitimacy of the nation-state and supports a form of nomadic capitalism.

The Role of Organisational Change Management in Offshore Outsourcing of Information Technology Services Aug 06 2020 This research study seeks to understand the nature of organisational change with respect to offshore outsourcing of information technology services in a multinational pharmaceutical company, and to examine the effectiveness of approaches used to manage this

change so that lessons may be drawn from these experiences. Despite the abundant literature on effective organisational change management, the key factors that need to be managed properly at different stages of the offshore outsourcing process are not well understood. The research adopts a processual view to paint a broad picture of the issues involved in these different stages. A generic process model of change, based on the review of the change literature, was first developed to represent how change was intended to occur. This model focuses on the following four stages in the change process: context, diagnosis and planning, implementation, and institutionalisation. The research employs an interpretive case study approach and draws on fieldwork from three independent information systems departments (cases) of the company, where offshore outsourcing programmes were implemented. Qualitative data from semi-structured interviews, direct observation and document analysis are analysed by applying the generic process model to produce a detailed account of the way in which change was managed in the case organisations. The findings reveal that a combination of contextual factors, both external and internal to the company, influenced the adoption and use of offshore outsourcing in the case organisations. Externally, the economic forces were found to be the main catalyst for the change, while internally the role of the executive leadership and the lack of internal resources further explain the motivations behind the adoption of offshore outsourcing. The study illustrates that achieving successful outcomes from offshore outsourcing activities critically depends on the organisation adequately addressing a number of factors, such as conveying a sense of urgency, developing and communicating the vision, identifying the benefits of change and how they will be delivered, generating short-term wins, providing education and training, developing a fit between the change and organisational culture, etc., throughout the change process. The findings also highlight the effects of offshore outsourcing on the case organisations, including change in job roles and responsibilities and organisational learning activities that enable corrective actions to improve change management efforts. An important contribution of this research is the development of a model providing a more comprehensive understanding of the change process associated with the implementation of offshore IT outsourcing. Recommendations for policy makers and change managers to improve change management practice based on the research findings, as well as recommendations for further research, form a significant part of the conclusions.

Offshore Development and Technical Support Dec 22 2021 Many companies are saving billions of dollars each year through offshoring. Others have been less successful, sinking unexpected resources and funds into an initiative that may or may not succeed. If one takes the view that outsourcing is driven by a desire to reduce costs, by buying into a consistent set of scalable processes which are shared across a number of organisations, then it follows that none of these areas should (or could) be sources of unique competitive advantage.
