It presents empirical studies conducted in three major settings: in countries such as Japan and Brazil where English functions as the language of international commerce; in multilingual countries such as Nigeria and Zimbabwe where English is the national language of education and government; and in such countries as Canada, the United Kingdom and the United States where English is the dominant language. The book opens with a discussion of language assessment in relation to debates about the nature of literacy; it concludes with a discussion of policy implications, which is grounded in literacy theory as well as in practical constraints such as available human and material resources.

**Voices from the Classroom: A Celebration of Learning** Oct 20 2021 Voices from the Classroom illustrates that teachers have a leading voice in the policies that impact their students and the profession of teaching. The aim is to provide a rich and broad view of the impact of inquiry in the classrooms, from primary to higher education, and to provide a window into the perspective of teachers. Voices from the Classroom allows us to advance this mission by identifying and then turning educators' ideas into action. The publication includes chapters on issues ranging from dyslexic students' geospatial abilities to teachers' differential behaviours related, student characteristics and the experiences of refugees with bullying in the educational space. All the contributions published in this book emerged from real classrooms: our teachers and researchers conducted their research by drawing on their experience as educators. We believe that these insights into everyday classrooms, and the issues affecting them, are crucial to making teaching and learning better. *Complexity Perspectives on Language, Communication and Society* Oct 08 2020 The "language-communication-society" triangle defies traditional scientific approaches. Rather, it is a phenomenon that calls for an integration of complex, transdisciplinary perspectives, if we are to make any progress in understanding how it works. The highly diverse agents in play are not merely cognitive and/or cultural, but also emotional and behavioural in their specificity. Indeed, the effort may require building a theoretical and methodological body of knowledge that can effectively convey the characteristic properties of phenomena in human terms. New complexity approaches allow us to rethink our limited and mechanistic images of human societies and create more appropriate emo-cognitive dynamic and holistic models. We have to enter into dialogue with the complexity views coming out of other more 'material' sciences, but we also need to take

steps in the linguistic and psycho-sociological fields towards creating perspectives and concepts better fitted to human characteristics. Our understanding of complexity is different – but not opposed – to the one that is more commonly found in texts written by people working in physics or computer science, for example. The goal of this book is to extend the knowledge of these other more ‘human’ or socially oriented perspectives on complexity, taking account of the language and communication singularities of human agents in society.
