Synopsis of Biological Data on the Tor Mahseer Tor Tor (Hamilton, 1822) Sep 23 2019 Among Indian mahseers, Tor mahseer Tor tor (Hamilton, 1822) is the most important food and game fish of India after Tor putitora (Hamilton, 1822). It constitutes an outstanding fishery in the Narmada River in central India. It has also settled in some Indian reservoirs which have been stocked with this fish. However, the building of dams across certain rivers has created reservoirs that have destroyed the natural breeding grounds of the fish and caused mortality on brood and juvenile fish indiscriminately. The mahseer fishery of India is further declining as a result of low recruitment of the fish. Stocking rivers and reservoirs with mahseer is therefore essential to restore the fishery. This synopsis is the compilation of biological data for Tor tor - Tor mahseer collected from different sources. The detailed biological information on Tor tor, including the feeding habits, breeding and growth patterns contained in this synopsis, will be very useful in planning the development of the mahseer fishery in India.

Landscapes and Landforms of England and Wales Dec 19 2021 This book presents the geomorphological diversity of England and Wales. These regions are characterised by an extraordinary range of landforms and landscapes, reflecting both the occurrence of many different rock types and drastic climatic changes over the last few million years, including ice sheet expansion and decay. The book begins by providing the geological and geomorphological context needed in order to understand this diversity in a relatively small area. In turn, it presents nearly thirty case studies on specific landscapes and landforms, all of which are landmarks in the territory discussed. These include the famous coastal cliffs and landslides, granite tors of Dartmoor, formerly glaciated mountains of Snowdonia and the Lake District, karst of Yorkshire, and many others. The geomorphology of London and the Thames is also included. Providing a unique reference guide to the geomorphology of England and Wales, the book is lavishly illustrated with diagrams, colour maps and photos, and written in an easy-to-read style. The contributing authors are distinguished geomorphologists with extensive experience in research, writing and communicating science to the public. The book will not only be of interest to geoscientists, but will also benefit specialists in landscape research, geoconservation, tourism and environmental protection.

Lutheran Salvationists? Jan 28 2020 The idea of a state religion is seldom connected to religious freedom and liberal, modern, and democratic states. However, such a situation existed in Norway until 2012, when the Lutheran Church was the state church of Norway. A large majority of the population belonged to the church, even though the percentage in 2013 had fallen to well over seventy-five. The relationship between the church and minority religious movements demanded adaptation and compromises from the minority churches. The Salvation Army's enculturation and accommodation during its 128-year history in Norway illustrates such a situation. The book examines how The Salvation Army accommodated itself both doctrinally as well as practically to the situation of a dominant state church. The study reveals such a close affiliation of Salvationists to the Norwegian Church as a state institution, that it raises the question of whether a concept of civil religion was implicitly present in Salvationists' view of the state church and their own adherence to the church. This situation also raises the question of what constitutes a real church. The book indicates the tension between Lutheran and Salvationist ecclesiology as well as the influence from the Lutheran Church.
