Plastic Waste Markets Dec 23 2021 This project examines the market for recycled plastic, with a primary focus on post-consumer plastic waste because this is considered to be the more problematic. The market for plastic waste generated in manufacturing and production is relatively strong and well-functioning; As a consequence, the majority of plastic waste from manufacturing and production is recycled. Post-consumer waste is much less homogenous: it comes from a wide variety of sources, and contains a wide variety of plastics and tends to be difficult to collect, sort, and recycle. This project identifies barriers to further utilisation of recycled plastics, and analyses a collection of policy tools that could be used to support and expand that market.

Thicker Than Water Apr 26 2022 Much of what you've heard about plastic pollution may be wrong. Instead of a great island of trash, the infamous Great Pacific Garbage Patch is made up of manmade debris spread over hundreds of miles of sea--more like a soup than a floating garbage dump. Less than nine percent of the plastic we create is reused, and microplastic fragments are found almost everywhere, even in our bodies. In *Thicker Than Water: The Quest for Solutions to the Plastic Crisis*, journalist Erica Cirino brings readers on a globe-hopping journey to meet the scientists and activists telling the real story of the plastic crisis. New technologies and awareness bring some hope, but Cirino shows that we can only fix the problem if we begin to repair our throwaway culture. *Thicker Than Water* is an eloquent call to reexamine the systems churning out waves of plastic waste.

Strategic Management for the Plastics Industry Oct 01 2022 Any general management book can give you the basics of quality assurance, strategic planning, logistics, and more. But how do you apply that knowledge to a company that requires not only sound business practices but also sound science to succeed? And how do you deal with the impact of globalized competition, a fluctuating world economy, and growing pressure from environmental groups and government regulators? Revised and updated throughout, *Strategic Management for the Plastics Industry: Dealing with Globalization and Sustainability, Second Edition* continues to combine coverage of management best practices with coverage of issues specific to the plastics industry. The author outlines the fundamentals of polymer manufacturing, compounding, distribution, processing, and auxiliary products that

make this industry unique, and shows how these factors affect management decisions. Using case studies and examples, he demonstrates the thinking behind successful managerial choices and illustrates what errors to avoid. The book also explains the interrelationships between technologies, markets, business sectors, and strategies in the plastics industry. Topics include company culture, staffing, how to manage internal growth, the "dos and don'ts" of acquisitions, and much more. The material is based on the author's more than 55 years of experience, extensive research, and interviews with managers throughout the industry. What's New in This Edition A new chapter on globalization and sustainability All chapters revised and updated Updated case studies, and one new case study The book is written for a broad audience, including aspiring professionals who wish to become managers, managers who want to round out their skills, consultants to the industry, and university students and faculty in plastics engineering and polymer chemistry departments. The combination of experience-based insights and research-based strategies make this an essential resource to help you operate productively, manage effectively, and grow in the global marketplace. Plastic Feb 10 2021 "This eloquent, elegant book thoughtfully plumbs the . . . consequences of our dependence on plastics" (The Boston Globe, A Best Nonfiction Book of 2011). From pacemakers to disposable bags, plastic built the modern world. But a century into our love affair, we're starting to realize it's not such a healthy relationship. As journalist Susan Freinkel points out in this eye-opening book, we're at a crisis point. Plastics draw on dwindling fossil fuels, leach harmful chemicals, litter landscapes, and destroy marine life. We're drowning in the stuff, and we need to start making some hard choices. Freinkel tells her story through eight familiar plastic objects: a comb, a chair, a Frisbee, an IV bag, a disposable lighter, a grocery bag, a soda bottle, and a credit card. With a blend of lively anecdotes and analysis, she sifts through scientific studies and economic data, reporting from China and across the United States to assess the real impact of plastic on our lives. Her conclusion is severe, but not without hope. Plastic points the way toward a new creative partnership with the material we love, hate, and can't seem to live without. "When you write about something so ubiquitous as plastic, you must be prepared to write in several modes, and Freinkel rises to this task. . . . She manages to render the most dull chemical reaction into vigorous, breathless sentences." —SF Gate "Freinkel's smart, well-written analysis of this love-hate relationship is likely to make plastic lovers take pause, plastic haters reluctantly realize its value, and all of us understand the importance of individual action, political will, and technological innovation in weaning us off our addiction to synthetics." —Publishers Weekly "A compulsively interesting story. Buy it (with cash)." —Bill McKibben, author of *The End of Nature* "What a great read—rigorous, smart, inspiring, and as seductive as plastic itself." —Karim Rashid, designer

Starting Points Oct 21 2021 This Element reviews the first 120 years of organization theory, examining its development from the sociology of organizations and management theory. It is initially organized around two streams of thought. The first is found in political economy and the sociology of organizations, with an emphasis on understanding the new organizations that arose in the late nineteenth and early twentieth centuries. The second derives from practitioner-scholars, whose aim was to provide theories and approaches to managing these new organizations. The Element then shows how each of the streams of understanding and managing came together to produce organization theory. In doing this, it also describes how the institutional frameworks in academic associations, academic centres and journals came out of these approaches and how they strengthened the development of organization theory.
