Handboek voor de behandeling van alcoholverslaving 02 2020 De Community Reinforcement Approach (CRA) is een in de Verenigde Staten ontwikkelde gedragstherapeutische methode voor de behandeling van verslaving. Deze behandeling gaat uit van het gegeven dat mensen afhankelijk van middelen blijven doordat zij worden omgeven door een overmaat aan factoren die hun alcoholgebruik bekrachtigen en hierbij aantrekkelijke, niet-verslavingsgebonden alternatieven in onvoldoende mate aanwezig zijn of zelfs ontbreken. CRA heeft als doel samen met de cliënt te werken aan een vervangende, nieuwe leefstijl die meer voldoening geeft dan hun middelengebruik. Inmiddels bestaat er ruimschoots bewijs dat CRA een effectieve behandeling voor cliënten met verslaving is. Tot op heden was er geen Nederlandstalige handleiding over CRA beschikbaar. Het Handboek voor de behandeling van alcoholverslaving voorziet in deze leemte. Deze gezaghebbende handleiding voor hulpverleners beschrijft helder en in detail de klinische praktijk van CRA, de theoretische grondslag ervan, de ontwikkeling van CRA en het hiernaar verrichte onderzoek in de VS en in Nederland. Voorts gaat het boek uitgebreid in op belangrijke CRA-procedures en biedt het vele voorbeelden van praktijkgesprekken die de procedures in deze methode illustreren. Voor alle afzonderlijke behandelonderdelen presenteren de auteurs een stappenplan. Ook geven zij nauwgezette aanwijzingen voor het uitvoeren van assessments en de behandeling van cliënten. Aan de orde komen ook problemen tijdens de gedragstherapie en strategieën om deze te overwinnen. De vertaling van het oorspronkelijke, Engelstalige handboek is bewerkt door Nederlandse CRA-deskundigen en is voorzien van voorbeelden voor de Nederlandse behandelingsituatie. Hierdoor is de methodiek direct toepasbaar in uw dagelijkse hulpverlening.

Clinical Approach to Infection in the Compromised Host 05 2021 "Infection in the Compromised Host" has become a classic chapter in textbooks devoted to infectious diseases and internal medicine.

The numbers of compromised hosts are increasing in the era of modern medicine because of our expanded capabilities to deal with difficult diseases, especially neoplasms. As a consequence, complications related to the intensive care administered to these patients are increasing as well. Under these circumstances, not only does the underlying illness create conditions favorable for the development of unusual infections, but often the therapy contributes to the acquisition of potential pathogens that turn into agents responsible for severe and frequently fatal disease. Growth and immunosuppression have been the two key factors in predisposing patients with cancer and other serious diseases to severe bacterial infections. Colonization by hospital-acquired pathogens and breaks in the anatomic barriers—as a result of disease or medical intervention—have contributed to the high incidence of infectious diseases in these patients. Although there is some overlap between types of infection in granulocytopenic and immunosuppressed hosts, each of these clinical entities has distinctive features that justify considering them separately, reserving the term immunocompromised hosts only when referring to patients who are predisposed to opportunistic infections. For about two decades, infections in granulocytopenic patients have attracted the attention of clinicians. This book represents a model for the study of antimicrobial drugs in hosts deprived of an essential element of defense against bacterial infection, that is, an adequate number of normally functioning white blood cells.

A Clinical Approach to Medicine Aug 22 2021 Ong Yong Yau and his team of editors have successfully assembled a panel of leading clinicians and researchers to provide an integrative review of the major areas of medicine — cardiology, endocrinology, gastroenterology, haematology, neurology, oncology, rheumatology, renal and respiratory medicine. Currently there are several other similar books but these are by authors from the west and therefore reflect western perspectives. In addition, the book also includes discussions on genetic diseases, infectious diseases and the pattern of antimicrobial resistance to antibiotics, highlighting local incidence and prevalence. Each chapter starts with the basic concepts of a particular topic and gradually develops the theme to present the state-of-the-art on the topic. With its focus on practices and expertise in the Asia-Pacific, this book is a must read for the student, practicing clinician and research scientist interested in the latest developments in the important fields.

Clinical Approach to Sudden Cardiac Death Syndrome Apr 05 2020 Clinical cardiologists are encountering an important challenge in the caring of families with inherited cardiac diseases. The manifestations of the inherited cardiac diseases causing sudden death express themselves at variable ages in the form of altered muscle function (i.e hypertrophic or dilated cardiomyopathy) or in the form of electrical abnormalities (i.e. Brugada syndrome, long QT syndrome). However, it is not uncommon that the first sign of the disease may actually be sudden cardiac death, even before the identification of clear clinical abnormalities. In this last decade, with more than 50 new disease-associated genes identified, the possibility of genetic testing has opened a new opportunity to disease diagnosis and prevention. Genetic and genomic research is continuously on-going not only to identify those at risk, but to better define their level or risk still with limited success.
